Intelligent Integration

Communication is everything. On board it is not only the tool that provides safe and effective operation but also the mechanism that facilitates service, experience and functionality. That is why C-Comm, brought to you by Channel 28, has been engineered to be more than just a radio system. It is a secure communication system developed on a foundation of substantial engineering experience in delivering and supporting robust, bespoke systems.

Hytera has been selected as a technology partner as the only supplier offering 4W robust handsets with IP67 protection, tough enough to withstand life on deck.

Get the most out of your radios with intelligent integration

C-Comm solutions are customised to your exact requirements, from the handsets themselves through to the definitive system integration which can incorporate the systems, functionalities and applications that best suit you and your yacht's exact needs. Our track record in delivering and integrating ensures your configuration is based on proven and existing solutions. C-Comm has already been integrated with

a number of major suppliers. It is up and running, integrated to the systems on board of several major yachts built by the leading European superyacht yards. Using carefully selected suppliers and working with ETOs and captains, C-Comm is engineered to be robust with outstanding usability, performance and flexibility.

C-Comm integration is not a theory, it's a proven fact!

Choose an engineered solution. Choose C-Comm

Integrated on yachts built at:

- Abeking & Rasmussen
- Amels
- Feadship
- Heesen
- Nobiskrug
- Oceanco
- Palmer Johnson
- CRN
- Sunrise

Integrated with:

- Transas
- Raytheon Anschutz
- MTU
- Imtech
- Siemens
- Crestron
- AMX
- Ming
- Multiple steward call systems

C-Comm at a glance

- **Troubleshooting services** for existing third party communication systems.
- **Crew training** for focussed radio discipline & protocols and system knowledge & understanding.
- **Fire systems & support** for the implementation of SOLAS regulations including intrinsically safe radios handsets as well as interfaces and system programming.
- **After sales support** backed by our suppliers for both warranty and non-warranty hardware plus support for continued engineering, changes and improvements to the design or upgrades.
- **No monthly fees** as we do not believe that excellent service requires a monthly subscription.
- **Digital Radio** for secure communications and bespoke integration options.
